

RADIODERMATITIS:

A VERY COMMON SIDE-EFFECT

IN 95% OF ALL CANCER PATIENTS,

TREATED WITH RADIOTHERAPY*

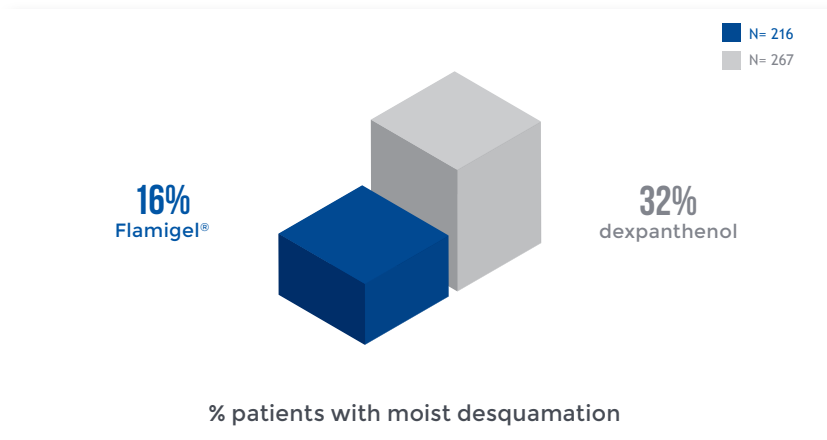

Flamigel®

REDUCES MOIST DESQUAMATION*

RESTORES THE MOISTURE BALANCE OF THE SKIN

CLINICALLY TESTED

- Apply a thick layer (0.5 cm) of Flamigel® 3 to 6 times a day to the wound (do not rub).
- Only if necessary, cover with a plaster or bandage and change daily.

*Retrospective study of radiotherapy-induced skin reactions in breast cancer patients:

Reduced incidence of moist desquamation with a hydroactive colloid gel versus dexpanthenol
